

## Simply Safer

### See More | Detect More | Identify More

Since 2003, Advanced Detection's mechanical, electrical and software engineers have designed and manufactured Under Vehicle Inspection Systems (UVIS) that create a fast and effective way to ensure the safety of people and property.

Advanced Detection's LowCam® UVIS achieves the widest field-of-view of a vehicle's undercarriage with advanced imaging technology. Security professionals achieve the highest level of viewing potential with an array of HD cameras in conjunction with embedded License Plate Recognition (LPR) cameras, intelligent lighting, magnetic and LEDDAR sensors. These tools enable the viewer to see up and around areas of an undercarriage that cannot be seen using single image-only scanning.

Facility security is no longer confined to military installations. Awareness of potential threats has led a wide variety of businesses and organizations, private and public, to partner with Advanced Detection. Advanced Detection proudly works with government and military officials, local and state police forces and security professionals representing industrial manufacturing, power generation and public utilities, hospitality and finance/banking.

## About Advanced Detection Technology

Using a customer-centric approach, technological expertise and engineering excellence, Advanced Detection provides next-generation portable and permanent UVIS solutions that enable customers to save time, money and resources while realizing a higher level of security, confidence and success.

International growth has solidified our reputation as a global leader and trusted resource. From our headquarters in Mooresville, North Carolina, our dedicated team of experts support customers around the globe virtually and in-person..

## Global Markets Served:

**Defense:** Providing perimeter security for bases, staging areas and forward-deployed installations is a core focus. We recognize the pressure on military organizations to improve perimeter security and productivity while reducing costs.

**Public Safety:** When it comes to emergency response, spectator events and high-profile private gatherings, we arm our public safety customers with perimeter security solutions that are highly reliable, flexible, easy to deploy and have the lowest total cost of ownership.

**Government:** Working with global agencies, Advanced Detection is an important resource for protecting government officials and visiting dignitaries, safeguarding state and national landmarks and securing government facilities worldwide.

**Energy and Chemical:** Advanced Detection is playing a critical role in safeguarding the supply of reliable power and needed raw materials, in the U.S. and around the world, as well as the welfare of those who provide it.

**Commercial:** Guided by the need for prudence and preparedness, a variety of commercial buildings and facilities have taken cost-effective steps to monitor and manage their perimeters. Many of them have included intelligent solutions from Advanced Detection.

## Who do we work with? Glad you asked.

Below is a sample list of our customers.

### Permanent

VI104

VI150

VI250

### Portable

VI108

VI110

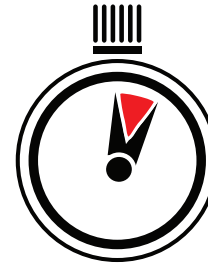

VI210

### Wireless

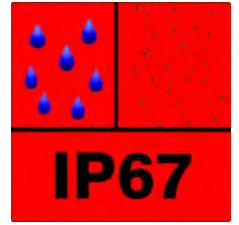

VI100

1 person  
3 minute setup

The most portable  
UVIS on the market.

## Our Promise to You:

**Design Intelligence:** Advanced Detection is an industry innovator, driven by a passion for creative problem-solving and customer-centric solutions.

**Engineering Excellence:** Driven by a passion for creative problem-solving, we engineer solutions that maximize our customers' operational efficiencies while minimizing their total cost of ownership.

**Customer-Centric:** We are committed to developing close relationships with each and every customer - before, during and after the sale - and promise to respond to our customers' individual challenges and opportunities as they occur.
