

Flame Resistant Grid Fleece Quarter Zip: Part # 310-QZ

Designed for optimum performance and comfort, the Serket™ FR ¼ Zip Grid Fleece is engineered using Polartec® Power Dry® FR Grid. Warm, comfortable, and quick drying it can be worn as the second, third or fourth layer in a system for temperate to very cold conditions or as a standalone garment in temperate to cool weather. This top is designed with a thin **FR stretch tuck-in panel** to alleviate bulk at the waist line and keep the garment in place. Thoughtful placement of flat and hidden seams enhances comfort next-to-skin.

This and all Serket™ high-performance flame resistant garments are engineered from a proprietary blend of flame resistant fibers and pass all military specifications for:

- **Flame resistance:** and no melt/no drip in accordance with ASTM-D-6413
- **Moisture management:** in accordance with AATCC C2C TS-017 & ASTM E 96
- **Air permeability:** in accordance with ASTM D 737
- **Anti-microbial:** properties in accordance with AATCC 100

The flame resistant and moisture-management qualities are **inherent** to the fibers and cannot be washed out of the fabric, while the anti-microbial properties are tested to retain 90% efficacy, even after 50 launderings.

This Serket™ garment is **100%** engineered, designed, tested and manufactured in the **United States** and is **Berry Compliant**.
