

The Romeo Six Apex Litter is a rigid litter designed and engineered specifically for weight/space savings as well as ease of deployment. The litter weighs only 9 pounds, collapses down to a small footprint, and can be deployed by a single person while standing up.

Deploy the litter by unfolding it until it locks, extend the tubes on each end and handles, and finally engage the spreader bars simultaneously with one foot and your hands (push/pull). Deployment can easily occur in under 30 seconds with a single person. Collapse the litter by 'breaking' down the two spreader bars, retracting all the tubes/handles, and folding it in half. Use the patient straps to secure the collapsed litter.

The Apex Litter was designed and tested to MIL-STD-810H salt/fog spray and extreme temperature change standards, and has undergone hundreds of hours of testing including load testing over 1,000 pounds, drop testing, and corrosive liquid and chemical agent testing including but not limited to: diesel, chlorine, gasoline, and bleach.

The Apex Litter ships with its own carrying bag and handle straps for long distance carries. Berry compliant, made in the USA.

Not to scale when compared to the deployed litter image. Carrying bag not shown.

Fully deployed Apex Litter

GENERAL SPECS

WEIGHT: 9 LBS

DIMENSIONS (*fabric when deployed*): 71" x 21.5"

DIMENSIONS (*collapsed*): 22.5" x 5.5/10" x 6.5" (LxWxD)
